Summary

Backend engineer with 10 years of experience, primarily in Go.

Comfortable owning a service end to end: clarifying requirements, design, test-driven implementation, documentation, observability, deployment, production debugging. Favor demoing a minimal working result to stakeholders early, because real feedback beats long planning.

Understand how concurrent reads and writes affect data integrity; have found and fixed race conditions in production systems.

Embrace AI tools: maintain context through docs and skills, build reusable workflows to reduce manual corrections and repetitive work.

Experience

Miss Moneypenny Technologies, Software Engineer, 2023 - present

Wallet Studio: a platform that manages digital passes in Google Wallet and Apple Wallet for enterprise customers. Remote from Vietnam, head office in Berlin, Germany.

- Owned the Google Wallet integration and sync service.
- Built new services: email dispatching, content compliance.
- Tuned PostgreSQL queries and indexes on tables with millions of rows, significantly improved batch operation speed.
- Instrumented services with OpenTelemetry metrics.
- Initiated flow diagrams, API specs, and operational runbooks.
- Tech: Go, Python, PostgreSQL, Claude Code.

Difisoft VN, Software Engineer, 2019 - 2023

- Built a real-time market data receiver for Ha Noi Stock Exchange (HNX) and Ho Chi Minh Stock Exchange (HOSE).
- Built a payment gateway integrating with multiple Vietnamese banks.
- Built an automated stock trading service.
- Built a Vietnamese identity card reader.
- Built a web crawler with near-duplicate filtering and stock symbol classification, including headless browser for JavaScript-rendered pages.
- Created a Windows DLL for receiving real-time market data in Excel.
- Tech: Go, MySQL, Kafka, MongoDB, etcd, Docker.

VCCorp, Software Engineer, 2019

- Wrapped RocksDB (C++ storage engine) for use in Go services.
- Tech: Go, C++.

VinID, Software Engineer, 2018

- Contributed to the backend of VinID, a consumer loyalty application.
- Tech: Go, MySQL.

Big Fat Team, Software Engineer, 2017 - 2018

- Built a multiplayer turn-based game server with about a thousand concurrent users. First project as main developer, first Go project.
- Tech: Go, PostgreSQL.

Thu Do Multimedia, Software Engineer, 2015 - 2017

- Built game bots for Xiangqi and card games.
- Built a video transcoding service.
- Tech: Python, ffmpeg.

Education

Hanoi University of Science and Technology (Đại học Bách khoa Hà Nội)
Engineer in Applied Mathematics and Informatics (Talented Program)
